

How to get started

Each course participant must register by completing the form on www.protectglobal.co.uk/e-learning

We then send a unique login to each person as well as a link to the courses. Alternatively, please email: info@protectglobal.co.uk

Save time and money

Skip the traffic jam and save time and money doing our e-learning at home whenever you want.

Our e-learning courses are free to use for registered PROTECT™ dealers/installers.

Multiple-choice test

Each course ends with a multiple-choice-test. Learning tools for the test, such as manuals and measurement guides, are accessible within the e-learning platform.

To pass, course participants must correctly answer at least 80% of the questions.

Learn how to install the PROTECT Fog Cannon® with free e-learning course

PROTECT™ offers free e-learning courses to all installers of our Fog Cannons™ worldwide.

What is included in the courses?

The courses are targeted at technicians, and others with an interest in the products, installation and specialised use of the Fog Cannon™.

Our technical e-learning courses range from the simple installation of Fog Cannons™ to the Intelli products and the use of API and IntelliCloud™.

See a description of our courses on our website: www.protectglobal.co.uk/e-learning.

How does it work?

Our e-learning courses are a combination of watching videos and answering multiple-choice questions. This is supported with additional learning tools, such as manuals and measurement guides, which are accessible within the e-learning platform.

To pass, course participants must correctly answer at least 80% of the questions. Everyone can go back and forth in the videos to repeat any of the courses.

Each course takes approximately one hour to complete, and the courses can be taken separately. However, course participants will need to pass course 1 to get access to course 2. And, they will need to pass course 1 & 2 to get access to course 3.

Why e-learning?

E-learning is a flexible way to learn. Choose your own time and place for learning. Moreover, there is no time restriction on how long it takes to complete. With passed courses in fitting and usage of Fog Cannons™, the safety, the quality and your credibility are increased at your customers. Course participants also gain a greater knowledge of security fog, which you can share with colleagues and customers.

Course participants completing the PROTECT™ e-learning courses will be equipped and ready to install any of our Fog Cannon™ range. Cenelec international standards stipulates that alarm installers/fitters must have received instruction and passed a test in order to mount any fog machine.

Please note, that the PROTECT™ e-learning courses are free to use for registered PROTECT™ dealers/installers.
